

GABRIEL MULLER - Senior Software Engineer

SKILLS

Frontend	Angular 21, React, Typescript, JavaScript, RxJS, Redux, Angular Material
Backend	Node.js, NestJS, Java, Spring Boot, MongoDB, Postgres, OpenAPI, AI
AI	Cursor, Claude Code, Antigravity
Mobile	React Native, Expo Go
DevOps	Docker, GitLab, Azure, OpenShift, Argo CD
Testing	Playwright, Cypress, Storybook
Architecture	Frontend architecture, middleware architecture, perf. optimization

SUMMARY

Senior software engineer with **12 years of experience** building large-scale web applications across frontend and full stack environments in finance and insurance.

Specialized in **frontend architecture, performance optimization, CI/CD pipelines and end-to-end testing frameworks**.

KEY ACHIEVEMENTS

Built an **internal shared library** (45+ components) adopted across finance department applications at Swiss Re (~14,000 employees globally).

Led frontend architecture across 6 Scrum teams (~10 engineers) building enterprise finance tools.

Optimized analytics dashboards at PostFinance through **algorithmic analysis** and UI architecture redesign, **reducing rendering time** 25s → 2s, DOM nodes 170k → 17k, and **bundle size** 3.25MB → 1.73MB.

Reduced development build 241s → 11s and incremental rebuilds 114s → 1.5s.

Designed and owned CI/CD pipelines and end-to-end testing frameworks across 5 companies, covering containerization, test seeding and page object architecture.

PORTFOLIO

Personal website [React / Tailwind]

⇒ <https://hoplageiss.github.io>

Angular toast library [Angular 21]

⇒ <https://www.npmjs.com/package/ngx-herald>

Angular loading library [Angular 21]

⇒ <https://www.npmjs.com/package/ngx-loading-handler>

Angular challenges, Leetcode style [Angular 21]

⇒ <https://hopla-challenges.netlify.app/challenge/1>

Collaborative commitment mobile app [React Native / NestJS, Expo, Prisma]

⇒ <https://hoplageiss.github.io/CommitX>

EXPERIENCE

Lead Full Stack Engineer (07/25 – present)

PostFinance – Bern

Led development of a Java / Angular 18 data analytics platform enabling stakeholders (~3,500 employees) to generate dashboards dynamically from XML report definitions (~10k lines).

Integrated AI-powered features into the analytics platform, including semantic search and natural language dashboard explanations.

Optimized rendering of large dashboards (40+ charts with multiple data sources) by redesigning the UI architecture and applying algorithmic analysis, reducing DOM nodes from ~170k to ~17k and improving load time from 25s to 2s.

Reduced frontend bundle size from 3.25MB to 1.73MB, improving application startup and runtime performance.

Optimized the frontend development build, reducing full build time from 241s to 11s and incremental rebuilds from 114s to 1.5s.

Designed and implemented the CI/CD pipeline using GitLab, automating build, testing and deployment workflows

Built the Playwright end-to-end testing suite to validate complex reporting scenarios and improve regression detection.

Led internal Angular Signals workshops, introducing modern Angular patterns and improving development practices across the team.

Lead Frontend Engineer (07/24 – 12/24)

Suva – Luzern

Led development of four Angular 18 internal applications used by ~500 employees to process insurance claims.

Designed complex state management architecture using Redux, enabling predictable state handling across multiple claim-processing workflows.

Implemented a translation management system using Tolgee, running locally to support complex multilingual UI requirements and streamline translation workflows.

Built and maintained Playwright end-to-end testing suite to improve regression detection and release stability.

Lead Frontend Engineer (11/19 – 06/24)

Swiss Re - Zurich

Initiated and built an internal shared library (45+ components) based on Angular Material with a strong focus on accessibility (WCAG), consistent branding, and UX quality - used across finance department applications at Swiss Re (~14,000 employees globally).

Started the shared components independently and grew adoption organically; **contributions later expanded to engineers from 6 Scrum teams (~10 developers)**.

Led the shared library development by defining the roadmap, **managing the backlog, and collaborating with product owners to prioritize new features and improvements**.

Occasionally developed full stack features end-to-end, spanning Angular frontend and **Java / Spring Boot backend**, within a large enterprise finance application.

Introduced Cypress end-to-end testing strategy across teams, improving regression detection and release reliability.

Designed and maintained Azure CI/CD pipelines. **Optimized the pipeline to run under 25 minutes by using parallelization, caching and artifact reuse**.

Lead Frontend Engineer (02/19 - 11/19)

Marks & Spencer – London

Built a React-based sofa configurator for the Marks & Spencer e-commerce platform, **serving ~30M customers annually**.

Led development of interactive map integration using Bing Maps V8 and Vanilla JavaScript.

Contributed to the first React integration within a legacy in-house frontend framework, **enabling incremental modernization of the platform**.

Lead Engineer (04/17 - 01/19)

Managed 24/7 – Milton Keynes UK

Architected and developed a cloud-based real-time analytics platform from scratch, with full ownership of the Angular frontend and Node.js / Express / MongoDB middleware layer. Integrated with a .NET backend via REST APIs and WebSockets (Socket.IO, SignalR) to deliver real-time operational metrics to end users.

Developed highly customizable dashboards using Gridster, RxJS and Redux enabling flexible layout and dynamic data exploration.

Designed and implemented the CI/CD pipeline using Docker, Codeship and Quay.io, automating build and deployment workflows.

EDUCATION

MSc Distributed & Parallel Computing

Cranfield University, UK (2014)

Focused on **parallel computing and high-performance computing**, working with the university's ASTRAL supercomputer. Gained experience with distributed systems, virtualization, containerization, and cloud computing infrastructure.

MSc in IT Management

Rouen Engineering, FR (2014)

Studied core computer science topics including algorithms, software engineering, and distributed systems, with a strong emphasis on project-based development and **collaborative engineering**.

Frontend Engineer / Scrum Master (03/16 – 02/17)

Workforce Software – MK UK

Contributed to development of an enterprise workforce management SaaS platform used by large global retailers.

Migrated application from AngularJS to Angular 2.

Led end-to-end testing automation initiatives, improving test coverage across the frontend application.

Facilitated Scrum ceremonies and continuous improvement initiatives within the development team.

Startup co-founder (09/14 – 03/16)

Unisphere – Oxford UK / Strasbourg FR

Built an AngularJS and Ruby on Rails MVP for a cloud-based virtual learning environment improving communication and collaboration between students and teachers.

Delivered the first production-ready platform within 5 months, deploying it across 5 universities.

Selected to **join Strasbourg and Oxford incubation programs**.
